👤 User
🌐 Web Client
⚡ API Gateway (server.mjs)
🔀 Hermes Gateway (Kanban / SQLite)
🗡️ Translator (Opus 4)
⚗ Philosophers (Wittgenstein · Quine · Frege)
📦 Consensus (2-of-3 vote)
📁 Filesystem (corpus/runs/)
🔬 Scientists (Koehn · Cho · Vaswani)
PHASE 1 — Submission & Setup
Paste segments · click Translate
POST /runs { segments: [...], client: "KCP-DE" }
mkdir corpus/runs/YYYY-MM-DD_NNN/
write source/segments.json
hermes kanban create
--assignee translator
202 Accepted { run_id, ws_url }
WebSocket connect ws://localhost:3000/runs/:id
Client now listens for progress events via WS
PHASE 2 — Translation (Hot Path · Step 1)
dispatch task: translate
read source/segments.json
write final/translation_draft.json
fs.watch() fires on file change
WS event agent_done { agent: "translator", progress: 25% }
PHASE 3 — Philosophical Review (Hot Path · Step 2, parallel)
dispatch 3 tasks in parallel
par
[Wittgenstein]
read translation_draft.json
write final/critique_wittgenstein.json
fs.watch() fires
WS event agent_done { agent: "wittgenstein", progress: 45% }
[Quine]
read translation_draft.json
write final/critique_quine.json
fs.watch() fires
WS event agent_done { agent: "quine", progress: 55% }
[Frege]
read translation_draft.json
write final/critique_frege.json
fs.watch() fires
WS event agent_done { agent: "frege", progress: 65% }
PHASE 4 — Consensus Vote
read critique_wittgenstein.json
read critique_quine.json
read critique_frege.json
alt
[2+ Approve (happy path)]
write consensus/verdict.json { result: "approve" }
verdict: approve
WS event consensus_reached { verdict: "approve", progress: 75% }
[Revise (loop — max 3 rounds)]
write consensus/verdict.json { result: "revise", notes: [...] }
re-queue translator with feedback
Revision loop repeats up to 3 rounds
[Block (human escalation)]
write consensus/verdict.json { result: "block" }
verdict: block → human review required
WS event escalation_required
PHASE 5 — Artifact Generation
generate final/review.html
(bilingual EN · DE + critic panel)
html-to-pdf → final/review.pdf
pdf ready
WS event artifact_ready { format: "pdf", progress: 95% }
WS event run_complete { status: "done", progress: 100% }
PHASE 6 — Download
Click Download PDF
GET /runs/:id/artifact?format=pdf
200 application/pdf (review.pdf)
File download complete
PHASE 7 — Async Science Audits (post-merge · cron-triggered)
These run independently after the run is merged to corpus. They do NOT block delivery.
Koehn: git diff → detect skill regression
Cho: read MEMORY.md → cross-agent integrity
Vaswani: token audit → prune skills / identity drift
write feedback/ reports
